14 min. sd. b&w. 16 mm. (CHEM Study teacher training program, no. 11)
Originally produced for television on videotape.
CREDITS: Producer, David W. Ridgway.
SUMMARY: George C. Pimentel emphasizes the general application of the explanation for bonding as presented in the CHEM study film. He uses the virial theorem to explain why the change in potential energy, rather than in kinetic energy, must be the dominant factor accounting for bonding.

Originally produced for television on videotape.
CREDITS: Producer, David W. Ridgway.
SUMMARY: J. Arthur Campbell discusses the background of the development of the periodic table, pointing out that its correlations and regularities are not perfect. He illustrates the kinds of trends and relationships that are evident in periods and families, and among the elements surrounding any given element.

7 min. sd. b&w. 16 mm. (CHEM Study teacher training program, no. 5)
Originally produced for television on videotape.
CREDITS: Producer, David W. Ridgway.
SUMMARY: George C. Pimentel demonstrates that in order to explain equilibrium, one needs not only the idea of a tendency toward minimum potential energy, but also the idea of a tendency, implemented by temperature, toward greater randomness. He points out that the treatment of equilibrium in CHEM Study is characterized by emphasis on the quantitative aspects and on the dynamic microscopic processes involved.

Originally produced for television on videotape.
CREDITS: Producer, David W. Ridgway.
SUMMARY: J. Arthur Campbell briefly outlines the history and purpose of CHEM Study Films. George C. Pimentel discusses why the concept of combining volumes of gases is used as the principal evidence for the atomic theory when it is first introduced. He explains CHEM Study's somewhat unusual approach to quantitative problems and suggests methods of teaching chemical symbols and equations.

Originally produced for television on videotape.
CREDITS: Producer, David W. Ridgway.
SUMMARY: J. Arthur Campbell demonstrates the usefulness of the electron energy level chart, and points out that ionization energy data provide some of the important evidence upon which the chart is based. He shows the flame test for sodium, and uses the energy level chart to identify the energy change responsible for the yellow color.

Introduction to the CHEM Study film: Mechanism of an organic reaction (Motion picture) Chemical Education Material Study, 1966. Released by Modern Learning Aids.

9 min. sd. b&w. 16 mm. (CHEM Study teacher training program, no. 15)
Originally produced for television on videotape.
CREDITS: Producer, David W. Ridgway.
SUMMARY: Henry Rapoport discusses the importance to the organic chemist of general principles which apply to chemistry as a whole. He stresses the importance of understanding the relationship between structure and properties and of understanding reaction mechanisms. He reviews some of the means that have been used by organic chemists to determine mechanisms.

9 min. sd. b&w. 16 mm. (CHEM Study teacher training program, no. 7)
Originally produced for television on videotape.
CREDITS: Producer, David W. Ridgway
SUMMARY: George C. Pimentel emphasizes the advantages of the quantum mechanical model of the atom over the planetary model; discusses the relationship of quantum number to the spatial distribution of the electron in the one-electron atom; considers the screening effect of electrons at lower energy levels upon those at higher energy levels, and the relationship of the quantum states of the electrons to the periodic table.
